FiberFlo Hollow Fiber Capsule Filters

Bacteria, Particle and Pyrogen Removal
The unique membrane structure of FiberFlo HF capsule filters provides consistent and verifiable pyrogen removal, which is superior to traditional, absolute rated membrane filters. High level endotoxin, bacteria, and spore removal make these point of use filters ideal for a variety of water and process purification applications.

High Flow Rates
FiberFlo HF capsule filters deliver fine filtration at high flow rates with low pressure drops, performance superior to traditional, pleated membrane capsule filters.

Longer Lasting
FiberFlo capsules have up to six times the surface area of comparable pleated capsule filters. This larger membrane surface area provides greater capacity and longer life than pleated filters, resulting in lower filter replacement costs.

Configurations to Fit Your Needs
FiberFlo capsule filters are available in two sizes, five micron ratings, and a variety of endcap styles. Both inline and crossflow configurations are available.

FiberFlo HF Capsule Filter Features

- Higher flow rates at lower pressure drops
- Extended life—cleanable, sanitizable
- Removes pyrogens*
- Polyphen® polysulfone filters can be autoclaved
- Quick rinse-up in ultrapure water
- In-situ integrity testable
- Hydrophilic membranes and hydrophobic membranes
- Biocompatible for medical applications

* FiberFlo 50 and FiberFlo 100 only.

Quality Assured
Each FiberFlo capsule filter is manufactured to meet medical device quality standards with adherence to QSR manufacturing guidelines. These filters exceed the requirements of USP Class VI Plastics Testing and meet USP XXIII standards for purified water extractables. FiberFlo HF capsule filters are integrity testable by diffusional or forward flow methods.

Sanitizable
The FiberFlo HF capsule filters with the Polyphen® Polysulfone membrane (FiberFlo 50, 100, 200 & 450) can be autoclaved up to five individual 20 minute cycles at 121°C (250°F) and 15 psig (1 bar). To prevent excessive pressures, do not steam sterilize filters in-line.

The FiberFlo 30 gas and vent capsule filter with the polypropylene membrane cannot be autoclaved.

The FiberFlo HF capsule filters can also be chemically sanitized using a 1% solution of Minncare® Cold Sterilant.
Proven Technology for Bacteria, Endotoxin and Spore Removal

FiberFlo Capsule Membrane Selection

**FiberFlo 30**
FiberFlo HF 30 offers very fine filtration for gas and venting applications. This polypropylene hollow fiber filter has an absolute pore removal rating of 0.03μm. The hydrophobic hollow fiber membrane repels water, but can be wetted by an aqueous solution with high surface tension if prewetted with alcohol.

**FiberFlo 50**
FiberFlo HF 50 offers the highest degree of control of particulates and microorganisms through its absolute pore removal rating of 0.05μm and the retentive characteristics of its Polyphen® polysulfone membrane. It is recommended for the most demanding pyrogen removal applications. FiberFlo HF 50 will remove 100 percent of endotoxin when challenged with a feed concentration of 5.0 EU/ml.**

**FiberFlo 100**
FiberFlo HF 100 offers the best balance of flow, pressure, retentive capacity, pyrogen removal and cost. Its absolute pore removal rating of 0.1μm and overall pore structure gives high water flow rates and excellent control of particulates, microorganisms and pyrogens. FiberFlo HF 100 will remove 100 percent of endotoxin when challenged with a feed concentration of 1.0 EU/ml.**

**FiberFlo 200**
FiberFlo HF 200 offers maximum flow rates without loss of bacteria retention. Absolute removal of Brevundimonas diminuta is a characteristic of this filter. The ability of FiberFlo HF 200 to remove bacteria and particulates gives it performance characteristics unmatched by traditional 0.2 micron pleated membrane filters.

**FiberFlo 450**
FiberFlo HF 450 offers high flow rates and high filtration efficiency for clarification and prefiltration applications in biological solutions, ultrapure chemicals and purified water. The 0.45 micron (absolute rating) capsules provide superior particle control and filter life compared to traditional 0.45 micron pleated filters.

**Test sensitivity of 0.06 EU/ml.**

Suggested Applications

**Medical and Laboratory**
- Medical device rinsing
- Hemodialysis water systems
- Medical equipment rinse water

**Industrial**
- Semiconductor
- Deionized water
- Industrial process water
- Dilute inorganic chemical solutions

**Pharmaceutical**
- Manufacturing
- Serum and blood fractions
- USP purified water
- Ophthalmics
- Growth media
- Fermentation feed stocks

**Food and Beverage**
- Distilled spirits
- Bottled water
- Seltzer
- Vinegar
- Food products
- Makeup and rinse waters

Fiber meets all USP-XXIII Class VI criteria, as well as, test standards for tissue cytotoxicity.

1. As determined by latex bead challenge. Procedure available upon request.
2. As determined by HIMA challenge and latex bead challenge.

How to determine ordering codes:

Catalog Number M-C-100-K is a 2.0 square foot capsule filter with cross flow design, a 0.10 micron rating, a quarter inch NPT inlet and a Luer outlet.

M - C - 100 - K

M = Capsule Size (Membrane Surface Area)
L = 6.0 ft²
M = 2.0 ft²
C = Inline/Cross Flow
C = Cross Flow
I = Inline

100 = Micron Rating
030 = 0.03μM*
050 = 0.05μM
100 = 0.10μM
200 = 0.20μM
450 = 0.45μM

K = End-Fitting Option (see chart)

* Available with hydrophobic polypropylene hollow fibers only.
** Hose barb endcaps are only available on medium size capsule filters.
