

PRODUCT UPDATE MEMO

To: Our Valued Hemodialysis Customers

From: Michael Verguldi, Product Manager - Medical

Date: September 27, 2010

Subject: F-801

Background: The F-801 is a Reverse Osmosis (RO) cart system that has been specifically designed for use with a Fresenius hemodialysis machine. This device has been available for many years as a compact and convenient method of producing AAMI quality water for acute kidney dialysis patients.

However, Mar Cor Purification has decided to discontinue offering the F-801, primarily due to a decline in demand and because of ongoing product consolidation efforts. We will continue to champion the acute dialysis marketplace with our other successful line of portable reverse osmosis product offerings, such as the Millenium™ RO.

Action: As of today, we will no longer be offering or selling F-801 machines. We will continue to support this device for the next seven years with parts and both technical and field help. During this time, you will continue to receive product assistance by contacting the Technical team for any related questions at Ext. 2904. Technical documentation and information will remain available on our website as applicable.

Starting September 28, 2017, Mar Cor Purification will no longer support the F-801 with parts and/or technical and field assistance as product parts and support will no longer be available for this device. Complaints concerning this product will not be taken into consideration after this date. Customers are advised to contact their local Sales Representative or a member of the Inside Sales team at Ext. 2109 or 2126 for another suitable product offering.

Effective Date: September 27, 2010
