**Re: Dialysis Services, Inc. Water Treatment Systems for Hemodialysis**

To whom it may concern,

In August 2007, Cantel Medical Corp acquired Dialysis Services, Inc. (DSI) through their subsidiary Mar Cor Purification, Inc. (MCP). At that time, MCP discontinued all DSI local manufacturing of equipment and systems for use in the dialysis marketplace. This included water treatment systems along with bicarbonate and acetate delivery systems for hemodialysis.

This letter is to inform you that MCP will no longer be providing any technical support, field repair, or service parts for products unique to DSI. However, MCP recognizes that some components of DSI Water Treatment Systems also comply with our 510(k) Water Treatment Systems and as such would still be available for service and support (i.e., most pretreatment units). The systems and components specifically designed and manufactured by DSI as part of their hemodialysis business (i.e., skid systems with controllers, bicarbonate mixers, and acetate holding and delivery units, etc...) will no longer be supported by MCP effective immediately.

If you have any question or concerns regarding this matter, please contact us directly or visit us online at [www.mcpur.com](http://www.mcpur.com). We appreciate your business and look forward to serving you in the days ahead.

Sincerely,

Michael Verguldi  
Medical Product Manager
