1. COMPANY AND PRODUCT IDENTIFICATION

1.1 Identification – Product Name: AntiChlor 30
1.2 Other means of identification
Synonym: Inorganic sulfite salts
1.3 Recommended Use Of The Chemical
and Restrictions On Use:
Name, Address, And Telephone Number Of
The Manufacturer, Or Other Responsible Party:
AVISTA TECHNOLOGIES
140 Bosstick Street
San Marcos, CA  92069
(760) 744-0536
klindsey@avistatech.com
1-800-424-9300 (United States)
1-202-483-7616 (International Collect)

2. HAZARDS IDENTIFICATION

EMERGENCY OVERVIEW: This product is a clear, colorless to pale yellow, solution with a trace sulfur odor. This product may irritate tissue depending on concentration and duration of exposure. Bisulfite salt (the main component of this product) is a respiratory sensitizer; subsequent exposures to very small amounts can cause allergic reaction. This product is neither reactive nor flammable. Thermal decomposition of this product produces irritating vapors and toxic gases (e.g. sodium oxides and sulfur oxides). Emergency responders must wear personal protective equipment (and have appropriate fire-extinguishing protection) suitable for the situation to which they are responding.

Physical Hazards Summary None
Potential Health Hazards Summary
Acute toxicity, Oral (Category 4)
Respiratory sensitizer (Category 1)
Potential Ecological Effects Summary None

2.1 Classification Of Product

U.S. OSHA classification Acute toxicity, respiratory sensitizer
Classification as per EC 1272/2008
( CLP/GHS) Acute toxicity, Oral (Category 4)
Respiratory sensitizer (Category 1)
WHMIS classification Class D2B: Toxic Material at > 1%
2.2 Label Elements OSHA/GHS

4. FIRST-AID MEASURES

4.1 Description of Necessary Measures

Skin exposure: If this product contaminates the skin, immediately begin decontamination with running water. Remove exposed or contaminated clothing, taking care not to contaminate eyes. Victim should seek immediate medical attention if any adverse exposure symptoms develop.

Eye exposure: If this product enters the eyes, open victim's eyes while under gently running water. Use sufficient force to open eyelids. Have victim "roll" eyes. Minimum flushing is for 15 minutes. Victim must seek medical attention.

Inhalation: If vapors, mists, or sprays of this product are inhaled, remove victim to fresh air. If necessary, use artificial respiration to support vital functions. Remove or cover gross contamination to avoid exposure to rescuers.
4.2 Most Important Symptoms/Effects:

Immediate: Inhalation exposure may cause coughing or sneezing. Symptoms of skin and eye contact may include redness and irritation. Ingestion may cause stomach pains, cramps, and gastritis.

Delayed: Prolonged or repeated skin overexposure to this product may cause dermatitis (dry, red skin). Symptoms may include tingling, redness, and visible injury.

4.3 Indication Of Immediate Medical Attention And Special Treatment Needed, If Necessary:

TARGET ORGANS: Acute: Skin, eyes. Chronic: Respiratory.

Victims of chemical exposure must be taken for medical attention if any adverse effects occur. Rescuers should be taken for medical attention if necessary. Take a copy of label and SDS to physician or health professional with victim.

5. FIRE-FIGHTING MEASURES

Flammable properties: Non-flammable aqueous solution

Flash Point °C: Not applicable.

Autoignition Temperature °C: Not applicable.

Flammable Limits (in air by volume, %):
  Upper: Not applicable.
  Lower: Not applicable.

5.1 Suitable And Unsuitable Extinguishing Media:

This material will not contribute to the intensity of a fire. Use extinguishing material suitable to the surrounding fire.

Water spray YES  Carbon dioxide YES
Foam YES  Dry chemical YES
Halon YES  Other YES

5.2 Specific Hazards Arising From Chemical:

When involved in a fire, this material may decompose and produce irritating fumes and toxic gases (e.g., carbon monoxide, carbon dioxide, and sulfur dioxide).

Explosion Sensitivity to Mechanical Impact: Not applicable.
Explosion Sensitivity to Static Discharge: Not applicable.

5.3 Special Protective Equipment And Precautions For Fire-Fighters:

Incipient fire responders should wear eye protection. Structural firefighters must wear Self-Contained Breathing Apparatus and full protective equipment. Move containers from fire area if it can be done without risk to personnel. If possible, prevent runoff water from entering storm drains, bodies of water, or other environmentally sensitive areas.
6. ACCIDENTAL RELEASE MEASURES

6.1 Personal Precautions

Uncontrolled releases should be responded to by trained personnel using pre-planned procedures. Proper protective equipment should be used. In case of a spill, clear the affected area and protect people.

Protective equipment

For small releases (< 5 gallons), clean up spilled liquid wearing gloves, goggles, faceshield, and suitable body protection. The minimum Personal Protective Equipment recommended for response to non-incidental releases (more than 5 gallons) should be Level B: triple-gloves (neoprene gloves and nitrile gloves over latex gloves), chemical resistant suit and boots, hard hat, and Self-Contained Breathing Apparatus.

Emergency procedures

Monitoring must indicate that exposure levels are below those provided in Section 3 (Composition and Information on Ingredients) and that oxygen levels are above 19.5% before anyone is permitted in the area without Self-Contained Breathing Apparatus.

6.2 Methods and Materials for Containment and Cleaning Up

Soak up or wet vacuum spilled liquid. Neutralize residue with sodium bicarbonate or other neutralizing agent for dilute acids. Decontaminate the area thoroughly. Test area with litmus paper to ensure neutralization. Place all spill residues in a suitable container. Dispose of in accordance with applicable U.S. Federal, State, or local procedures, or appropriate local standards (see Section 13, Disposal Considerations).

7. HANDLING and STORAGE

7.1 Precautions for Safe Handling

All employees who handle this material should be trained to handle it safely. Open containers carefully on a stable surface. Empty containers may contain residual liquid; therefore, empty containers should be handled with care.

As with all chemicals, avoid getting this product ON YOU or IN YOU. Wash thoroughly after handling this product. Do not eat or drink while handling this material. Avoid generating mists and sprays of this product. Remove contaminated clothing immediately.

During equipment maintenance follow practices indicated in Section 6 (Accidental Release Measures) to decontaminate equipment or clean-up small spills. Make certain that application equipment is locked and tagged-out safely if necessary. Collect all rinsates and dispose of according to applicable U.S. Federal, State, or local procedures or appropriate local standards.

7.2 Conditions For Safe Storage

Store containers in a cool, dry location, away from direct sunlight, sources of intense heat, or where freezing is possible. Store away from incompatible materials. Material should be stored in secondary containers, or in a diked area, as appropriate. Storage and use areas should be covered with impervious materials. Keep container tightly closed when not in use. If appropriate, post warning signs in storage and use areas. Inspect all incoming containers before storage, to ensure containers are properly labeled and not damaged.

Incompatibilities

Strong bases, amines, strong oxidizers, very strong acids, water reactive materials. It may react with metals to generate hydrogen gas. The product may release toxic gases if in contact with acids.

| Water and other components which are present in less than 1 percent concentration (0.1% concentration for potential carcinogens, reproductive toxins, respiratory tract sensitizers and mutagens). | Balance | None of the other components contribute significant additional hazards at the concentration present in this product. All pertinent hazard information has been provided in this document, per the requirements of the Federal Occupational Safety and Health Administration Standard (29 CFR 1910.1200), U.S. State equivalent Standards and Canadian Workplace Hazardous Materials Identification System Standards (CPR 4).

8.2 Appropriate Engineering Controls.

Use with adequate ventilation to ensure exposure levels are maintained below the limits provided in this Section or as low as reasonably achievable. Ensure eyewash/safety shower stations are available near areas where this product is used.

8.3 Personal Protective Equipment

- **Respiratory protection:** None needed under normal conditions of use. Use NIOSH approved respirators if ventilation is inadequate to control mists or vapor. If respiratory protection is needed, use only protection authorized in the U.S. Federal OSHA Standard (29 CFR 1910.134), applicable U.S. State regulations, or the applicable local standards. Oxygen levels below 19.5% are considered IDLH by OSHA. In such atmospheres, use of a full-face piece pressure/demand SCBA or a full-face piece, supplied air respirator with auxiliary self-contained air supply is required under OSHA’s Respiratory Protection Standard (1910.134-1998).

  - **Eye protection:** Use approved safety goggles or safety glasses, as described in OSHA 29 CFR 1910.133. Splash goggles with a faceshield may be needed if splash hazards exist.

  - **Hand protection:** Wear chemical impervious gloves (e.g., Solvex™, Neoprene).

  - **Body protection:** If needed, use body protection appropriate for task (e.g., Tyvek suit, rubber apron) to protect from splashes and sprays.

9. PHYSICAL and CHEMICAL PROPERTIES

- **Appearance:** This product is a clear, colorless to pale yellow, solution with a trace sulfur odor.
- **Odor:** Mild sulfur odor
- **Melting Point °C:** -2.0 - 0°C
- **Initial Boiling Point °C:** 100-110°C
- **Flammability:** Non-flammable
- **Vapor Density (air = 1):** Similar to water
- **Solubility (in water):** Soluble
- **Viscosity:** Similar to water
- **Decomposition Temperature:** N/A
- **How To Detect This Substance (Warning Properties):** The color and odor may act as warning properties associated with this product.

  - **Odor Threshold:** N/A
  - **pH:** 3.5 – 5.5
  - **Boiling Point Range °C:** N/A
  - **Evaporation Rate (water = 1):** Similar to water
  - **Vapor Pressure mm Hg @ 20°C:** 18
  - **Relative density (water = 1):** 1.15 – 1.35
  - **Oil-Water Partition Coefficient:** N/A
10. STABILITY and REACTIVITY

10.1 Reactivity  Not considered reactive.
10.2 Chemical Stability  Stable
10.3 Possibility of hazardous reactions  Hazardous polymerization will not occur.
10.4 Conditions to avoid  Avoid mixing with incompatible materials.
10.5 Incompatible Materials  Strong oxidizers, very strong acids, water reactive materials.
10.6 Hazardous Decomposition Products  Thermal decomposition of this product may generate carbon monoxide, carbon dioxide, and sulfur oxides.

12.2 Persistence and Degradability  The components of this product decompose in soil and water.
12.3 Bioaccumulative Potential  The components of this product are not expected to bioaccumulate.
12.4 Mobility in Soil  When spilled onto soil, this product will infiltrate downward, the rate being greater with lower concentration because of reduced viscosity.
12.5 Other Adverse Ecological Effects  This product may be harmful to aquatic life if large volumes of it are released into an aquatic environment.

13. DISPOSAL CONSIDERATIONS

Preparing Wastes of this Product for Disposal  Waste disposal must be in accordance with appropriate U.S. Federal, State, and local regulations or with local regulations. This product, if unaltered by the handling, may be disposed of by treatment at a permitted facility or as advised by your local waste regulatory authority.

Disposal of Contaminated Packaging  Cleaned containers can be recycled or disposed of as non-contaminated waste, if authorized by your local authorities. Dispose of containers as required by local regulations.

U.S. EPA Waste Number  Not applicable.
14. TRANSPORT INFORMATION

This material is hazardous as defined by 49 CFR 172.101 by the U.S. Department of Transportation.

14.1 UN Number: UN2693
14.2 UN Proper Shipping Name: Bisulfites, aqueous solutions, n.o.s. (Sodium metabisulfite)
14.3 Transport Hazard Class(es): 8, Corrosive
   Transport label(s) required: 8, Corrosive
14.4 Packing Group: III
14.5 Marine Pollutant: Not applicable
14.6 Transport in Bulk (Annex II of MARPOL 73/78 and IBC Code): Not applicable
14.7 Special Transport Precautions: Not applicable
   National Motor Freight Classification: LTL: 100; T: 70

International Air Transport Association

16.4 Date of Printing December 29, 2015
A large number of abbreviations and acronyms appear on a MSDS. Some of these which are commonly used include the following:

**DEFINITIONS OF TERMS**

| Section 2 | GHS: Global Harmonization System  
OSHA: U.S. Occupational Safety and Health Administration.  
CLP: Classification and Packaging  
WHMIS: Workplace Hazardous Materials Information System  
STOT: Specific Target Organ Toxicity |
|---|---|
| Section 3 | CAS #: Chemical Abstract Service index number  
EINECS #: European Chemical Substances Information System index number |
| Section 5 | NFPA: National Fire Protection Association  
Health Hazard: 0 (material that on exposure under fire conditions would offer no hazard beyond that of ordinary combustible materials); 1 (materials that on exposure under fire conditions could cause irritation or minor residual injury); 2 (materials that on intense or continued exposure under fire conditions could cause temporary incapacitation or possible residual injury); 3 (materials that on short exposure could cause serious temporary or residual injury); 4 (materials that under very short exposure could cause death or major residual injury).  
Flammability Hazard: Refer to definitions for “Hazardous Materials Identification System”  
Flash Point: Minimum temperature at which a liquid gives off sufficient vapors to form an ignitable mixture with air.  
Autoignition Temperature: The minimum temperature required to initiate combustion in air with no other source of ignition.  
LEL: The lowest percent of vapor in air, by volume, that will explode or ignite in the presence of an ignition source.  
UEL: The highest percent of vapor in air, by volume, that will explode or ignite in the presence of an ignition source. |
| Section 7 | ACGIH: American Conference of Governmental Industrial Hygienists, a professional association which establishes exposure limits.  
TLV - Threshold Limit Value - an airborne concentration of a substance which represents conditions under which it is generally believed that nearly all workers may be repeatedly exposed without adverse effect. The duration must be considered, including the 8-hour Time Weighted Average (TWA), the 15-minute Short Term Exposure Limit, and the instantaneous Ceiling Level (C). Skin absorption effects must also be considered  
PEL - Permissible Exposure Limit - This exposure value means exactly the same as a TLV, except that it is enforceable by OSHA. The OSHA Permissible Exposure Limits are based in the 1989 PELs and the June, 1993 Air Contaminants Rule (Federal Register: 58: 35338-35351 and 58: 40191). Both the current PELs and the vacated PELs are indicated. The phrase, “Vacated 1989 PEL,” is placed next to the PEL which was vacated by Court Order.  
IDLH - Immediately Dangerous to Life and Health - This level represents a concentration from which one can escape within 30-minutes without suffering escape-preventing or permanent injury. The DFG - MAK is the Republic of Germany’s Maximum Exposure Level, similar to the U.S. PEL.  
NIOSH is the National Institute of Occupational Safety and Health, which is the research arm of the U.S. Occupational Safety and Health Administration (OSHA).  
UN is the United Nations  
ECB and IBC are商 the European Community Bureau of Reference and the International Maritime Organization, respectively.  
ISO is the International Standards Organization  
IARC and NTP rate chemicals on a scale of decreasing potential to cause human cancer with rankings from 1 to 4. Subrankings (2A, 2B, etc.) are also used.  
TDLo, the lowest dose to cause a symptom and  
TCLo the lowest concentration to cause a symptom;  
LD50, LDLo, and LD0, or TC, TC0, LC0, and LC, the lowest dose (or concentration) to cause lethal or toxic effects.  
BEI - Biological Exposure Indices, represent the levels of determinants which are most likely to be observed in specimens collected from a healthy worker who has been exposed to chemicals to the same extent as a worker with inhalation exposure to the TLV. |
| Section 11 | LD50: Lethal Dose (solids & liquids) which kills 50% of the exposed animals;  
LC50: Lethal Concentration (gases) which kills 50% of the exposed animals;  
ppm: Concentration expressed in parts of material per million parts of air or water;  
mg/m3: Concentration expressed in weight of substance per volume of air;  
mg/kg: Quantity of material, by weight, administered to a test subject, based on their body weight in kg  
IARC - the International Agency for Research on Cancer;  
NTP - the National Toxicology Program,  
RTECS - the Registry of Toxic Effects of Chemical Substances,  
OSHA and CAL/OSHA.  
IARC and NTP rate chemicals on a scale of decreasing potential to cause human cancer with rankings from 1 to 4. Subrankings (2A, 2B, etc.) are also used.  
TDLo, the lowest dose to cause a symptom and  
TCLo the lowest concentration to cause a symptom;  
LD50, LDLo, and LD0, or TC, TC0, LC0, and LC, the lowest dose (or concentration) to cause lethal or toxic effects.  
BEI - Biological Exposure Indices, represent the levels of determinants which are most likely to be observed in specimens collected from a healthy worker who has been exposed to chemicals to the same extent as a worker with inhalation exposure to the TLV. |
| Section 12 | LC50: The lowest concentration in water which kills 50% of the test subjects.  
EC50: The Effect Concentration in water at which 50% of the test species if affected. |
